

A TRAINING SEMINAR WAS HELD WITH THE PARTICIPATION OF INTERNATIONAL EXPERTS

Experts of the German company "Wirtgen Group" and its official dealer in Uzbekistan "YO'LTES" company and specialists of enterprises and organizations within the committee were invited to the educational seminar organized by the Committee of Automobile Roads today.

At the seminar, international experts provided useful information about the process of restoring the road in cold regenerator (recycling), the capabilities of the W200F and W220F road cutters, the S1800-3 asphalt paving machine of the "Vogele" company, and the technologies for laying asphalt concrete and cement concrete pavements.

It is no exaggeration to say that this information about new innovative technologies in the field of road construction was useful for the local experts who participated in the

training seminar.

The main goal of this event, organized by the Committee of Motorways with foreign partners, is to widely involve the techniques and technologies of foreign companies with many years of experience and qualifications in the field of road construction in our country and to take it to new levels.
