

THE SNOW IS ON THE "KAMCHIK" PASS

"Kamchikavtoyol" company sprinkles sand-salt mixture on the roads day and night to prevent the road surface from being slippery, in order to ensure uninterrupted two-way movement of vehicles in the pass during snowfall, or the snow removal works are being carried out.

Currently, motor vehicles are moving safely in both directions. The pass is occasionally covered with snow and fog. Visibility on the roads is 300 meters, air temperature is 4 degrees, humidity is 66 percent. Wind speed is 2-11 m/s. We recommend that drivers who travel along the "Kamchik" pass take all safety measures.
